

Bag Given Type Automatic Packing Machine

The bag - given packing machine replace the handmade package, and the operator will just need to put hundreds of bags in the entrance of the equipment at one time. The equipment manipulator will take the bag, print the date, open the bag, measure the signal of the metering device and fill the product, seal and output automatically.

Full automatic operation is needed in the whole process of packaging, which improves the production efficiency for your company effectively.

The labor cost and management cost are saved, and the cost is greatly reduced.

It is widely used in paper and plastic composite, plastic and plastic composite, aluminum plastic composite, PE composite, and so on.

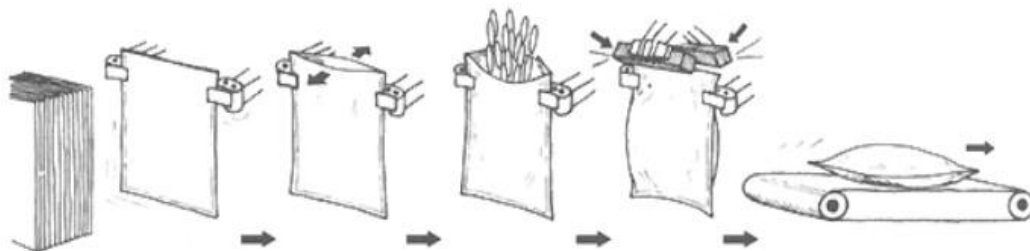

Low consumption, the use of prefabricated packaging bags, packaging bags with perfect design, good sealing quality.

[Technical Parameter]

Bag Material	composite membrane、PE、PP
Packing bag type	Zipper self-supporting bag, self-supporting bag with mouth, self-supporting bag, plane bag
Bag size	W:80mm-200mm L:100-400mm
Packing range	5-1000 grams
Packing speed	≤50 bags/min
Filling precision	±0.1%
Voltage	380V 50HZ/60HZ
Power	3KW

Working Process:

Load bag-Clip Bag-Open bag-Filling sauce-Sealing-Delivery

Machine Specification:

Illustration	Description
--------------	-------------

	6 Station packing machine: The electric control system adopts advanced PLC, color touch screen), friendly human-machine interface and convenient operation. The main motor is controlled by variable frequency speed control. In production, the frequency can be set at random in a certain range on the touch screen according to the requirements.
	Sauce filling device Piston control It is connected with the PLC of the packing machine, the machine will fill Sauce of 1 KG into the bag
	Rotary Panel Made by SS, easy to adjust for different size bags.
