

Manual capsule filling machine

High-precision manual capsule board is the first semi-automatic mode. It is based on the traditional capsule filling board, packer, capsule closing machine and full-automatic capsule filling machine. It has been repeatedly tested and improved. The latest one has a very high accuracy for each hole. If the hollow capsule is deformed, it can also fit properly. It is a pharmacy all over the country. The high-quality brand agreed in the industry has many advantages, such as fast arranging speed, high automatic arranging rate and high synthetic power. Compared with traditional capsule filling boards and packers, it not only saves a lot of manual work, but also increases the output by 4-10 times. It is well received by laboratories, outpatient departments, clinics, pharmacies and pharmacies.

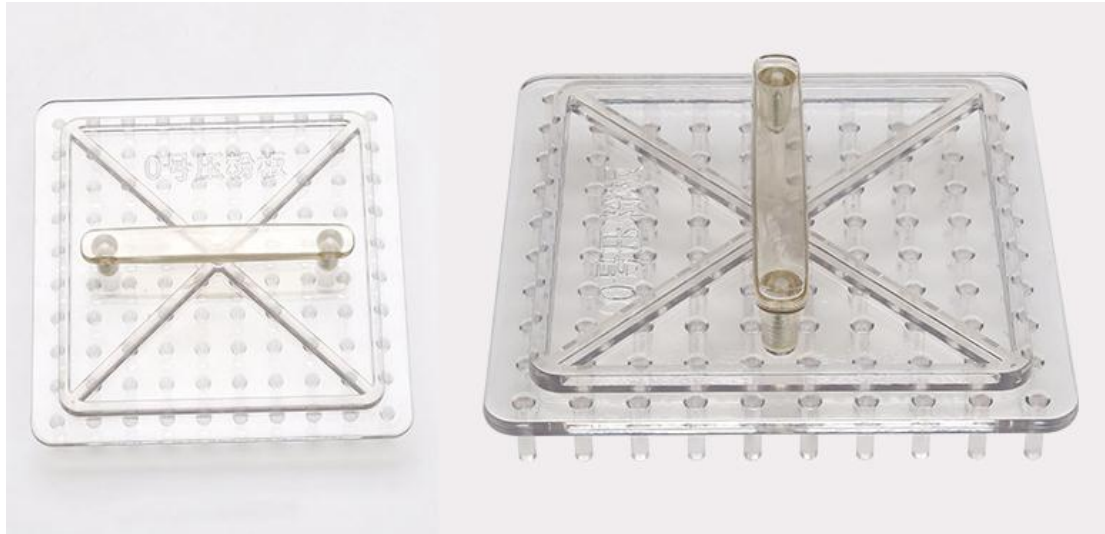

Features:

Capsule quantity: 100
